

CURS 0x0B

ALINIAREA MEMORIEI

```
struct MixedData
{
    char Data1;
    short Data2;
    int Data3;
    char Data4;
};
```

```
struct MixedData /* After compilation in 32-bit x86 machine */
{
    char Data1; /* 1 byte */
    char Padding1[1]; /* 1 byte for the following 'short' to be aligned on a 2 byte boundary
    assuming that the address where structure begins is an even number */
    short Data2; /* 2 bytes */
    int Data3; /* 4 bytes - largest structure member */
    char Data4; /* 1 byte */
    char Padding2[3]; /* 3 bytes to make total size of the structure 12 bytes */
};
```

- de unde vine această schimbare?
- CPU-ul citește în blocuri, și vrea ca blocurile să fie aliniate
- cum calculăm acest padding?
 - notăm cu *start* adresa de start
 - notăm cu *align* alinierea pe care o vrem (o putere a lui 2)
- $\text{padding} = (\text{align} - (\text{start} \bmod \text{align})) \bmod \text{align}$
 - $= (\text{align} - (\text{start} \& (\text{align} - 1))) \& (\text{align} - 1)$
 - $= -\text{start} \& (\text{align} - 1)$
- $\text{aliniat} = \text{start} + \text{padding}$
 - $= \text{start} + ((\text{align} - (\text{start} \bmod \text{align})) \bmod \text{align})$
 - $= (\text{start} + (\text{align} - 1)) \& \sim(\text{align} - 1)$
 - $= (\text{start} + (\text{align} - 1)) \& -\text{align}$
